

## Press Release ~ September 2008

### New Web Site Launched

Web Site Home Page

To support Quartzlock's superb range of precise time and frequency standards, RF distribution amplifiers and measurement systems we have commissioned an entirely new web site.

Working with our internet consultants and design company the new site has been carefully designed to allow fast and easy access to all our product data including standard specifications and available options for each product.

Web Site Product Page

### Easy access to information

Visitors have a choice of routes to reach the information they need. If you already know which product you want you can go directly to it using the main menu. If you need help you can use the **Products** drill-down menu or **Applications** search to narrow down your choices.

### Downloads

PDF datasheets are available with only 2 clicks in **Datasheet Central** and from product pages where you will also find product manuals. Our latest software releases are in **Support**. **FAQs** have their own section and technical articles are in **News**, and are available to all.

### Newsletters & more

Email newsletter sign-up, overseas representatives and details of exhibitions we are attending are also available via our new web site.

### Press Centre

For editors and our representatives the **Press Centre** gives controlled access to high-resolution product images and print quality PDF datasheets.

### Quartzlock moving ahead

Our new web site is part of a major new marketing initiative which includes new and newly-developed products, attendance at exhibitions and a new export campaign.
